### **DETAILED ACTION**

1. Applicant's response and amendment filed 4/19/04 have been received.
2. Claims 1—11 and 15-36 have been cancelled.
3. New claim 37 has been entered.
4. Claims 12-14 and 37 are under consideration.

**5. Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.**

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

Specifically the application fails to comply with CFR 1.821(d), which states:

(d) Where the description or claims of a patent application discuss a sequence that is set forth in the "Sequence Listing " in accordance with paragraph (c) of this section, reference must be made to the sequence by use of the sequence identifier, preceded by "SEQ ID NO: " in the text of the description or claims, even if the sequence is also embedded in the text of the description or claims of the patent application.

Claim 37 recites a sequence disclosed in GenBank Accession No. U67609. However, this sequence has neither been disclosed in the specification nor in the sequence listing.

For compliance with sequence rules, it is necessary to include the sequence in the "Sequence Listing" and identify them with SEQ ID NO. In general, any sequence that is disclosed and/or claimed as a sequence, i.e., as a string of particular bases or amino acids, and that otherwise meets the criteria of 37 CFR 1.821(a), must be set forth in the "Sequence Listing." (see MPEP 2422.03).

For the response to this office action to be complete, Applicants are required to comply with the Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures.

Art Unit: 1632

6. The written description rejection of claims 1-14 has been withdrawn in view of applicants' arguments and amendments to the claims.

7. The 112 2<sup>nd</sup> paragraph rejection of claims 12-14 has been withdrawn in view of applicants' arguments and amendments.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 12-14 remain rejected and newly presented claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Alam et al (The Journal of Biological Chemistry. Vol. 271:30263-30271, 1996) or Ray et al (The Journal of Biological Chemistry. Vol. 272: 7546-7555, 1997) in view of Takahashi et al (Exp. Anim. 48:255-261, 1999) and Perraud et al (Oncogene Vol. 7:993-997, 1992) and Ausubel et al. Short Protocols in Molecular Biology. 3<sup>rd</sup> edition 1992, page 9-28 - 9-30, John Wiley and Sons) for reasons of record set forth in the previous office action of 1-15-04.

Claims 12 and 13 have been amended to recite -507 to +1 of human FGF1B promoter. It is noted that while the claims as instantly amended recite a certain nucleotide number, cited art of Ray teaches the -507 to +1 of human FGF1B promoter (see figure 1). Additionally, as indicated by applicants in their response, Alam et al teaches the mouse promoter (see the third paragraph from bottom in the left column on page 30263). Additionally, since claims 12 and 13 "recite comprising" the sequence disclosed in Ray et al and Alam et al will encompass the claimed sequence.

***Response to Arguments***

Applicant's arguments filed 4-19-04 have been fully considered but they are not persuasive. Applicants arguments that the references do not provide reasonable expectation that once the claimed construct was introduced into the genome of a transgenic animal, an animal model useful for studying brain specific expression of FGF1B promoter would be produced, are not persuasive because there is no such limitation in the claim. Additionally, the rational that applicants have given as to how a transgenic animal that expressed brain specific expression of FGF1B promoter is flawed. It is noted that Perraud et al discuss their results on page 996 and state that there results do not prove that CFTR was not functional in the murine organs rather that ependymal cells were more prone to SV40 T-antigen related tumorigenesis and other reasons. Therefore, results of Perraud et al don't support applicants arugments.

10. No claim is allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will

Art Unit: 1632

the statutory period for reply expire later than SIX MONTHS from the date of this final action.
